

## Automagic Classic Wah Wah Wah 20 Years Anniversary brings back the Wah Sound of 1967

As 20 years ago we designed a replacement board around your Vox ® or Cry Baby ® Wah. In addition to the possibility of a crunch-free Switching by footswitch or AM sensor we have directly connected the circuit of a Wah Wah Wah from 1967 with integrated as well as the 3 further features **Buffer Off/On, True Bypass / Parallel Input und two sound options.**

To replace the board you only have to solder the blue cable. must only be removed from the footswitch everything else is plugged or screwed. For a product in perfection, the Wah circuit with the same high quality components made as 50 years ago with **composite carbon resistors and NOS style.** transistors to reproduce the 1967 sound.

The switchover of the effect, parallel input, true bypass is the same as 20 years ago in the AM kit via JFETs. This guarantees the owner a crease-free, wear-free switching without cracking probably forever.

### The truth for good sound is in the past.

Germany has always been a leader in studio electronics and the production of electronic components. That's why we use the same components as the famous V676a microphone amplifiers JFETs. Our Wah Wah Wah chokes are also hand wound by a traditional German company according to our specifications, based on the first prototype of 1967.

### AM Classic Mod. 2017 Features

AM Classic Mod. 2017 Features. The following functions can be activated via Mini Jumper on / off.

1. buffer active jumper on
2. Wah Wah Wah effect True Bypass Jumper on or Parallel Input Instrument Jumper off.
3. Two different sounds 1967 Style Jumper off / 1970 Thomas Organ Style, Jumper on.

#### Accessories

4. stowage Led can be plugged without soldering.
5. mini switch can be plugged into positions 1, 2 & 3 without soldering so that the functions can be activated externally.

Drilling hole: Led Ø 5,5mm, Mini Switch Ø 6mm
